ENTERPRISE BROCHURE 2026

Cut Risk. Ship Faster. Scale Without Breaking.

A software and cybersecurity consultancy helping enterprises across the USA, EU, and UK solve their hardest engineering and security problems — as one accountable team.

Software Engineering · AI Systems · Cybersecurity

Serving clients across USA · EU · UK

Smart. Secure. Sentra.

ABOUT SENTRA TECHNOLOGIES

We Solve the Problems Slowing Your Business Down

Most companies come to us with the same frustrations: legacy systems holding back growth, security gaps they can't close, and vendors who over-promise and under-deliver. We fix that. Sentra serves tech-enabled companies, SaaS platforms, SMBs, and healthcare providers across the USA, EU, and UK.

We are a hybrid firm — combining software engineering, AI, and cybersecurity under one roof. One accountable team instead of three vendors finger-pointing when something breaks. The result: faster delivery, fewer gaps, and systems you can actually trust in production.

A Software & AI Engineering

Custom AI systems, automation platforms, and full-stack applications — architected for scale, designed for your specific operational landscape.

B Cybersecurity Solutions

Security assessments, penetration testing, cloud security, and compliance frameworks — protecting your digital infrastructure end to end.

✓ Security Built In, Not Bolted On

We embed security from day one so you don't discover vulnerabilities weeks before an audit — or worse, after a breach.

✓ Predictable, Enterprise-Grade Delivery

Structured sprints, clear documentation, and honest timelines. You always know what's shipping, when, and why.

PILLAR A

Software & AI Engineering

We don't just write code — we engineer systems. From AI-powered platforms to custom enterprise applications, every solution is built for production, not prototyping. Our engineering team delivers across the full stack with security, scalability, and performance as non-negotiable requirements.

AI Systems

Intelligent platforms powered by LLMs, ML pipelines, and NLP — deployed into production environments.

- Custom LLM integrations & AI agents
- NLP communication systems
- Predictive analytics & data intelligence
- AI-driven decision support

Automation

End-to-end workflow automation that connects systems, orchestrates processes, and eliminates manual bottlenecks.

- CRM & pipeline automation
- Internal process orchestration
- Multi-platform API integrations
- Automated reporting & compliance

Custom Platforms

Purpose-built software — from internal tools to full SaaS products. Architected for scale.

- Full-stack web & mobile platforms
- Client portals & dashboards
- SaaS product development
- Legacy system modernisation

Why Companies Choose Sentra for Software

Production-First Mindset

We don't build prototypes that gather dust. Every system we deliver is engineered for day-one deployment with full monitoring, documentation, and support.

Security Embedded

Security is not a feature request — it's baked into our development lifecycle. OWASP compliance, encrypted infrastructure, and auditable code from sprint one.

PILLAR B

Cybersecurity Solutions

Cybersecurity is not a separate conversation from software — it's the same discipline, executed with the same rigour. We protect your digital infrastructure through structured assessments, real-world testing, cloud hardening, and regulatory compliance frameworks.

Security Assessment & Auditing

Map your attack surface, identify vulnerabilities, and get a prioritised remediation roadmap — before attackers find the gaps.

- Infrastructure & application scanning
- Security architecture review
- Risk scoring & prioritisation
- Executive + technical reporting

Penetration Testing

Simulated real-world attacks that actively exploit weaknesses to prove what a real attacker could do to your systems.

- External & internal network pentesting
- Web app & API security testing
- Social engineering assessments
- Exploit documentation & remediation

Cloud Security

Secure your AWS, Azure, and GCP infrastructure. Harden configurations, enforce least-privilege access, and prevent cloud misconfigurations.

- Cloud security posture management
- IAM auditing & access control
- Container & Kubernetes security
- Cloud-native architecture review

Governance, Risk & Compliance

Navigate GDPR, HIPAA, SOC 2, and ISO 27001 with frameworks that satisfy auditors without slowing your engineering team.

- Regulatory readiness assessments
- Risk management frameworks
- Policy development & documentation
- Continuous compliance monitoring

Why Companies Choose Sentra for Cybersecurity

Not Just Scanners

We don't hand you a tool-generated report. Our analysts manually verify findings, test exploitability, and provide actionable remediation steps your team can execute.

Engineering + Security

Because we also build software, we understand the engineering trade-offs. Our security recommendations don't break your velocity — they integrate into your workflow.

INFRASTRUCTURE & COMPLIANCE

Enterprise-Grade Technology. No Compromises.

Technology Stack

CLOUD & INFRA	AI & ML	SECURITY	ENGINEERING
AWS	OpenAI	Burp Suite	Python
Google Cloud	Anthropic	Nessus	Node.js
Azure	LangChain	OWASP ZAP	React
Docker	TensorFlow	Snyk	PostgreSQL
Kubernetes	PyTorch	CrowdStrike	Redis

Security & Compliance Positioning

GDPR Readiness

Data minimisation, consent management, and right-to-erasure compliance built into every system architecture.

Secure Cloud

Hardened environments with network segmentation, encrypted transit, and automated threat detection.

End-to-End Encryption

AES-256 at rest, TLS 1.3 in transit. Zero-knowledge architecture where applicable.

AI Security

Prompt injection prevention, output sanitisation, and adversarial testing for every AI deployment.

Compliance-First Dev

SOC 2, ISO 27001, HIPAA requirements embedded from sprint one, not retrofitted.

Incident Response

Predefined playbooks, 24-hour breach notification, and post-incident forensic analysis.

CASE STUDIES & ENGAGEMENT MODEL

Proven Results. Measurable Impact.

MediBridge Health Group

HEALTHCARE

Deployed intelligent communication system with automated appointment management across 23 clinic locations, reducing manual workload and improving patient throughput.

40% Reduced wait times

3x Appointment throughput

68% Fewer no-shows

Nexus Logistics

SUPPLY CHAIN

Implemented full workflow automation suite with real-time tracking, automated vendor notifications, and centralised analytics dashboard.

60% Less manual processing

$2.1M Annual savings

4.2hrs Saved per person/day

Clearwater Financial

FINANCIAL SERVICES

Deployed integrated communication and data intelligence platform with automated KYC workflows and real-time compliance tracking.

85% Faster onboarding

99.9% Compliance accuracy

2x Client capacity

Engagement Model

1

Discovery & Assessment

We audit your current systems, map pain points, and identify high-impact opportunities. Free initial consultation included.

2

Architecture & Delivery

Our team designs, builds, and deploys your solution with weekly progress reviews and full documentation at every stage.

3

Support & Optimisation

Post-deployment monitoring, performance optimisation, and ongoing security updates. We don't walk away after launch.

Tell Us the Problem.
We'll Tell You How to Solve It.

A free 30-minute call with a senior engineer — no slide decks, no sales pitch. Just straight advice on what to do next. You decide if we're the right fit.
